

OMNIRES

NEO

NEO

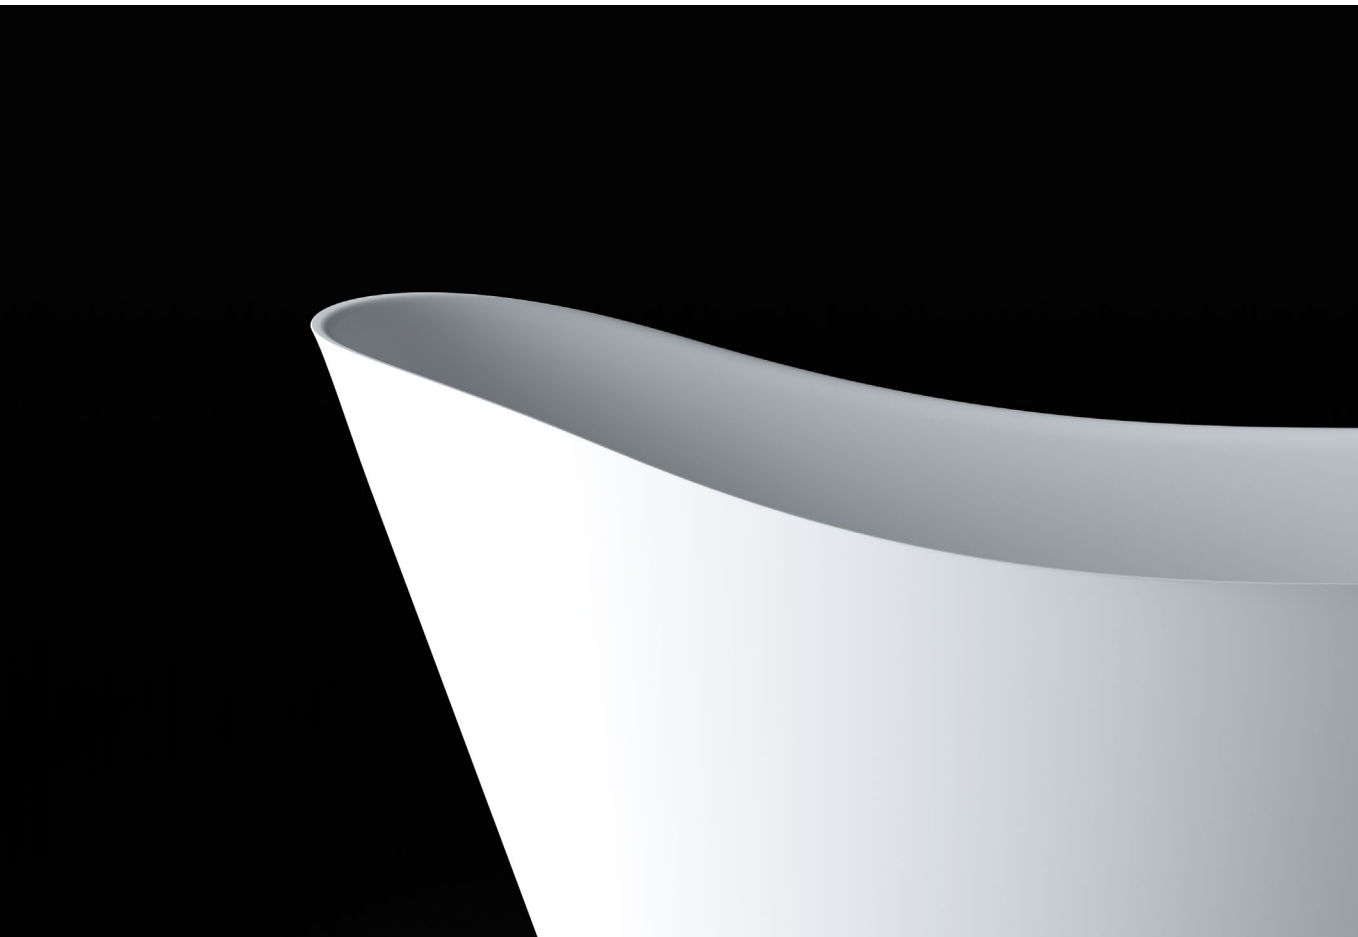

Baths and basins from the NEO collection, designed by Pawlak & Stawarski Studio, combine time-honoured details with contemporary minimalism. They are a nod to tradition and a celebration of form refined with perfect detailing.

The collection has won several prestigious design and innovation awards, including: Red Dot Design Award, German Design Award and Must Have award.

The specially contoured shape of the baths provides ergonomic support for the back, while the wide bottom offers comfortable space for shared moments of relaxation. The one person bath features elegant, high back support, ensuring unparalleled bathing comfort.

„When designing NEO, we were drawing our inspiration from neoclassical forms. The pronounced undercut at the base, the curves and the subtly finished rims add a touch of timeless elegance to the collection”.

Bartłomiej Pawlak & Łukasz Stawarski

Both baths and basins are fitted with matching waste covers discretely concealing the waste. This solution creates a seamless appearance that complements the product's harmoniously contoured shape.

The bath incorporates practical features that enhance functionality, including a perfectly matching click-clack waste bath trap for easy draining of the water from the bath.

The basins and baths are made of an innovative composite material whose main component is Polish dolomite rock. The production technology guarantees impeccable execution of every detail while ensuring remarkable durability.

The composite material absorbs heat from the air and water, maintaining the optimum temperature for a long time, which, combined with a surface that is smooth and pleasant to the touch, ensures unparalleled comfort of use.

The satin finish of the baths and basins resembles a smooth stone that has been polished by water.

The product surface is impeccably smooth and perfectly even, and their dimensions guarantee full compliance with technical drawings.

The surface is free from any ruptures or micro openings. This prevents bacterial growth, ensuring the shower tray is easy to clean.

The composite material is characterised by exceptional durability and stability and is resistant to damage, extreme temperatures and loads.

The surface of baths and basins is warm to the touch and perfectly retains temperature, enhancing user comfort and saving energy.

The composite material provides outstanding acoustic absorption, reducing the sound of the falling water hitting the surface.

The collection is available in two classic white finishes: one with a natural sheen reflecting the light and a matt finish that is silky-smooth to the touch. The timeless elegance of the finish, the perfect proportions and the pronounced undercut at the base of the basins and baths, reminiscent of ancient architectural solutions, make the collection ideal for both traditional and contemporary interiors.

Since 1990, we have been passionate about creating high-quality products and experiences – to empower others to live in inspiring, well-considered interiors.

We believe that our common responsibility is to strive for sustainable development. That is why we design consciously to minimise our environmental footprint across our products' life span and implement measures that help reduce water and energy consumption. Our products have won numerous design and innovation awards, including: Red Dot Design Award, German Design Award, Must Have award and Dobry Wzór award.
