AQUAROCK

AQUAROCK

The AQUAROCK shower tray collection expertly combines inspiring colours with a harmoniously proportioned, minimalist design. The matt surface of the shower trays has the feel of natural fine sand, ensuring absolute showering comfort and serving as a perfect example of functional elegance.

The shower trays' matt surface has the texture of fine sand to the touch, which transforms showering into an extraordinary sensory experience. This pleasant texture also offers the highest slip resistance rating and a heightened sense of safety even when the surface is damp.

"When designing the collection, I aimed to create a product that would not only be incredibly pleasant to the touch but one that would also ensure the highest standards of safety. We have developed a texture that would provide a unique sensory experience while guaranteeing the highest slip resistance rating".

Paulina Shacalis, OMNIRES Studio

BALANCED FUNCTIONALITY

The shower trays are made of a composite material whose main component is dolomite rock. The innovative design and production technology allow to reduce the product's weight.

AQUAROCK

The carefully profiled shape of the surface ensures optimum water drainage, and the matching waste cover discreetly conceals the waste, aesthetically completing the look.

The matt **ANTI SLIP** surface of the shower tray guarantees the highest slip resistance rating and an enhanced level of safety even when wet.

Thanks to **LIGHT FORM** production technology, the weight of the shower tray is 15% lower than standard, which makes transport and installation easier.

The composite material allows for precise cutting and adaptation of the shower tray's shape to the space available in the bathroom.

The **EASY MOUNT** system enables drill-free shower tray installation. Trays may be installed on the bathroom floor, flush with the tiles, or on legs.

The composite shower tray is characterised by exceptional durability and stability and is resistant to damage, extreme temperatures and loads.

The surface of the shower tray is warm to the touch and perfectly retains temperature, ensuring the comfort of use and energy savings.

The composite material provides exceptional acoustic absorption, reducing the sound of the falling water hitting the shower tray's surface.

The surface is free from any ruptures or micro-openings. This prevents the growth of bacteria and helps maintain a high level of hygiene.

The collection is available in six matt nature-inspired finishes: from brick-red terracotta and deep olive green through elegant, subtle grey and warm beige to expressive black and classic white. The incredible diversity of colours and the broad range of sizes and shapes provide a choice of products that can be tailored to individual requirements and allow to create bespoke interiors.

Anti-slip composite shower tray, square

Since 1990, we have been passionate about creating high-quality products and experiences – to empower others to live in inspiring, well-considered interiors.

We believe that our common responsibility is to strive for sustainable development. That is why we design consciously to minimise our environmental footprint across our products' life span and implement measures that help reduce water and energy consumption. Our products have won numerous design and innovation awards, including: Red Dot Design Award, German Design Award, Archiproducts Design Award, Must Have award and Dobry Wzór award.
