

## MERTON | acrylic shower tray, 80 x 100 cm

---

Finish: gloss white (BP)

The OMNIRES MERTON acrylic shower tray is made of highly resistant layers of polymers and mineral components, mixed with foamed PU+ compounds. The composite is the most durable material used to manufacture bathing products. It offers superb thermal (the tray remains warm) and acoustic (the noise generated by drops of water is reduced by 40%) insulation properties. Thanks to its unique filling and stabilizing system, as well as metal reinforcing components, the tray retains a very compact form. It is resistant to humidity and mold. The *EasyMount* system means that no drilling is required to install the tray. The antibacterial *CleanShield* coat improves the product's hygienic properties and facilitates cleaning. The tray may be installed traditionally, on the bathroom floor, or with its upper edge positioned flush with the floor surface.

Certificates: European Declaration of Performance (CE marking)

## Technologies

---

The shower tray is made using the innovative STABILSOUND PLUS technology. Thanks to the multilayer construction reinforced with Stonicryl® it is extremely durable, stable and resistant to pressure.

The shower tray is coated with the CLEAN SHIELD technology. An anti-bacterial and anti-allergy coating enhances its hygienic properties, and makes it easy to clean and maintain.

The product effectively muffles the sound of the falling water reducing it by 40%.

The tray's internal structure is water-resistant, offering long-lasting protection against moisture and mould build up.

Thanks to the EASY MOUNT system, the shower tray may be installed drill-free; on top of the bathroom floor or flush with the tiles.

## Specification

---

- side 1: 80 cm
- side 2: 100 cm
- height: 4.5 cm
- depth: 2.5 cm
- drain dimension: ø9 cm
- shower tray with integrated panel
- shower tray waste not included (choose)

## Product care

---

### How to properly clean a shower tray?

Shower trays should be cleaned regularly, preferably after each use, so as to prevent the build-up of hard-to-remove dirt. For daily maintenance of surfaces, use a soft cloth (for example, a microfibre cloth) and a solution of water with a mild cleaning agent with a natural composition. After cleaning the shower tray, rinse it thoroughly with clean water and wipe it dry. It is not recommended to use rough or abrasive materials and corrosive or bleaching substances to prevent damaging the surface of the product.

For more stubborn dirt, use a 10% citric acid solution with water. Apply the solution to the product for 2 to 3 minutes. After that time, rinse the product thoroughly with clean water and wipe it dry. If necessary, the process can be repeated. Residues from hair dye, lipstick or other products with a dyeing effect should be removed from the surface immediately to prevent the formation of permanent marks.
