OMNIRES

CLASSICA M+ | freestanding bath with overflow, 170 x 84 cm

Finish: gloss white (BP)

The OMNIRES CLASSICA freestanding bath is an ingenious combination of modernity and the most stunning classical principles. The distinctive profiling and decorative milling give the bath a truly original look and a romantic feel. The bath's optimal width and the streamlined, gently curved rim guarantee maximum comfort when bathing. As the waste is centrally located, the two-person bath is ideal for a moment of shared relaxation. A discreet overflow integrated into the inner wall of the bathtub prevents water from rising above the rim, protecting the bathroom from flooding. The bath comes with a click-clack waste bath trap.

The bath is made of a composite material M+ whose main component is dolomite rock. The innovative production technology guarantees impeccable execution of every detail while ensuring remarkable durability and resistance.

The gleaming surface of the bath, naturally reflecting the light, has a finish in classic white.

Design: Paweł Gliński, Marmite

Technologies

The material provides highly desirable, precise finishing. Product surface is perfectly smooth and even, and dimensions precisely match the technical drawing (tolerance 0-3 mm).

The product is very pleasant to the touch. The satin finish resembles a smooth stone that has been polished by water.

Thanks to its high density, M+ composite provides exceptional acoustic absorption. Sound of the falling water is minimised.

Product care

How to protect and clean composite and ceramic products?

Products made from M+ composite material and ceramics should be cleaned regularly, preferably after each use, so as to prevent the build-up of hard-to-remove dirt. For daily maintenance of external surfaces, use a soft cloth (for example, a microfibre cloth) and a solution of water with a mild cleaning agent with a natural composition, then rinse the product thoroughly with clean water and wipe it dry. It is not recommended to use rough or abrasive materials and corrosive or bleaching substances to prevent damaging the surface of the product.

For more stubborn dirt, use a 10% citric acid solution with water. Apply the solution to the product for 2 to 3 minutes. After that time, rinse the product thoroughly with clean water and wipe it dry. If necessary, the process can be repeated. Residues from hair dye, lipstick or other products with a dyeing effect should be removed from the surface immediately to prevent the formation of permanent marks.
