

SWITCH | sink mixer (compatible with any filtering system)

Finish: brushed brass (BSB)

The SWITCH kitchen sink mixer combines a minimalist design that draws on well-balanced proportions with practical functionality that provides regular and filtered water. The clearly defined and accurately finished details enable intuitive use by pointing to two separate water streams: regular water near the lever and filtered water at the end of the spout – simply twist the ribbed spout ring to quickly fill a glass with deliciously fresh drinking water.

The mixer is available with a set of versatile connectors, allowing its connection to any filtering system installed inside a standard sink base cabinet.

Made of high grade brass, the mixer is equipped with a superior quality ceramic cartridge offering COLD START technology. This means that the water stream for washing hands and dishes opens with cold water by default, which saves energy and prevents the needless use of hot water. The vertical starting position of the lever allows the mixer to be installed close to the wall without needing to worry about the space required to turn it to open the water source.

Brushed brass is a sophisticated finish with a cool gold hue and satin brushed surface. The product is coated using the advanced PVD technology.

Design: Paulina Shacalis, OMNIRES Studio

Certificates: Polish Hygienic Certificate PZH

Technologies

The mixer is equipped with the highest quality ceramic cartridge which ensures smooth and precise water flow control whilst guaranteeing long term product performance.

Aerators and shower heads with the AIR WATER technology inject air into the water making it soft and pleasant to the touch. Water stream is quiet and consistent, even if any variations in water pressure occur.

COLD START technology means that the water stream for washing hands and dishes opens with cold water by default, which saves energy and prevents the needless use of hot water.

The mixer comes with a set of versatile connectors allowing its installation onto any water filtration system.

The product is coated using the advanced PVD technology which guarantees highest possible durability, offers exceptional resistance to damage and facilitates cleaning.

The product is made of high quality A-grade brass.

Flow characteristics

- water flow at 3 bar: 7 l/min
- working pressure 1-5 bar
