

SWITCH | sink mixer with a water filtering system

Finish: matt black (BLM)

The SWITCH kitchen sink mixer combines a minimalist design that draws on well-balanced proportions with practical functionality that provides regular and filtered water. The clearly defined and accurately finished details enable intuitive use by pointing to two separate water streams: regular water near the lever and filtered water at the end of the spout – simply twist the ribbed spout ring to quickly fill a glass with delicious fresh drinking water.

The mixer is available as a set with the Dafi water filtration system consisting of a filter cartridge and a flow meter. The activated carbon and resin technology used in the filter cartridge reduces the content of chlorine and heavy metals while lowering the hardness of water. Changing the filter cartridge is extremely simple, and the need for replacement is indicated by measuring the actual flow of filtered water. The filtering system components can be easily installed in any sink base cabinet.

Made of high grade brass, the mixer is equipped with a superior quality ceramic cartridge offering COLD START technology. This means that the water stream for washing hands and dishes opens with cold water by default, which saves energy and prevents the needless use of hot water. The vertical starting position of the lever allows the mixer to be installed close to the wall without needing to worry about the space required to turn it to open the water source.

Matt black is an expressive finishing with a velvety to the touch surface.

Technologies

The mixer is equipped with the highest quality ceramic cartridge which ensures smooth and precise water flow control whilst guaranteeing long term product performance.

Aerators and shower heads with the AIR WATER technology inject air into the water making it soft and pleasant to the touch. Water stream is quiet and consistent, even if any variations in water pressure occur.

COLD START technology means that the water stream for washing hands and dishes opens with cold water by default, which saves energy and prevents the needless use of hot water.

The filtration system purifies the water by lowering the levels of chlorine and heavy metals and reduces the hardness of the water. The filtered water tastes deliciously fresh and is additionally enriched with potassium.

The product is made of high quality A-grade brass.

Flow characteristics

- water flow at 3 bar: 7 l/min
- working pressure 1-5 bar
