

ALBANY | kitchen tap

Finish: brushed steel (IN)

The OMNIRES ALBANY kitchen tap features a minimalist, precise line softened by delicate curves. The satin finish gives the design a slightly industrial feel. The original design of the swivel spout is inspired by symmetrical arches. The OMNIRES ALBANY kitchen tap is made of high quality INOX stainless steel. It is exceptionally resistant to damage and retains its appearance for many years. The mixer is equipped with the highest quality ceramic cartridge. Innovative technological solutions reduce water consumption by 50% while offering comfort and ease of use. The product does not contain lead.

Certificates: Polish Declaration of Performance (B marking), Polish Hygienic Certificate PZH

Technologies

The mixer is equipped with the highest quality ceramic cartridge which ensures smooth and precise water flow control whilst guaranteeing long term product performance.

The kitchen tap, made of high quality stainless steel, features a perfectly crafted design and exceptional resistance to damage, preserving its appearance even after years of use.

Flow characteristics

- water flow at 3 bar: 14 l/min
- hot water supply: max. 90 °C
- working pressure 1-5 bar
- noise class: II

Specification

- stainless steel
- swivel spout
- spout reach: 21 cm
- water outflow height: 28 cm
- total mixer height: 39 cm

Product care

How to take care of bathroom and kitchen fittings?

You should clean your bathroom and kitchen fittings regularly, preferably after each use, so as to prevent the build-up of hard-to-remove dirt. For daily maintenance of external surfaces, use a soft cloth (for example, a microfibre cloth) and a solution of water with a mild cleaning agent with a natural composition, then rinse the product thoroughly with clean water and wipe it dry. It is not recommended to use rough or abrasive materials and corrosive or bleaching substances to prevent damaging the surface of the product.

For more stubborn dirt, use a 10% citric acid solution with water. Apply this solution directly to the product or cover the product with a cloth soaked in the solution. After 10 minutes, rinse the product thoroughly with clean water and wipe it dry. If necessary, the process can be repeated.

What is the best method for cleaning the aerator?

Remember to regularly control the flow of water through the aerator so as to ensure its problem-free operation and protect it from damage. In the case of small contaminants in the water or "hard" water, remove the aerator once every few weeks and clean it with a brush. In the case of more stubborn dirt, we recommend soaking the aerator for 10 minutes in a 10% citric acid solution with water.
