OMNIRES

SLIMLINE | shower head with ceiling shower arm

Finish: semi-matt black (BLH)

The OMNIRES SLIMLINE shower head with ceiling-mounted arm enhances the comfort of the showering space by ensuring even water distribution during use. The ceiling-mounted installation allows the fittings to be discreetly concealed while offering greater freedom in bathroom design. Crafted from high-quality brass, it stands out for its durability and resistance to damage, while the silicone insert helps prevent water from accumulating inside the product and makes the shower head easier to keep clean.

Black is an expressive, dark finish with a perfectly smooth, satin surface.

Certificates: Polish Declaration of Performance (B marking), Polish Hygienic Certificate PZH

Technologies

Developed to minimise environmental footprint, the ECO WATER technology reduces water consumption by approx. 30% without compromising on the overall product experience.

The shower head is made using the ANTI-SCALE technology. It incorporates a silicone insert that prevents internal water stagnation. Occasional tilting of the shower head, so that any stagnant water could flow out through the nozzles, guarantees long term product performance.

The product is made of high quality A-grade brass.

Thanks to the AIR WATER technology, the water is soft and pleasant to the touch, enhancing the overall showring experience.

The EASY CLEAN nozzles allow the user to easily remove any limescale build up by simply wiping their silicone surface.

Flow characteristics

- working pressure 1-5 bar
- water flow at 3 bar: 11.6 l/min
- Acoustic group: II
- Flow rate class: Z

Specification

- made of brass
- 1-function rain shower head, diameter: Ø25 cm
- ceiling-mounted shower arm, length: 24 cm
- water connection: 1/2"
- distance from ceiling to shower head: 31 cm

Product care

HOW TO TAKE CARE OF A SHOWER HEAD?

Remember to regularly wipe the silicone nozzles with your hand to remove any limescale deposits that might be forming on their surface. Avoid using harsh cleaning agents that may damage the nozzles and the surface of the shower head.

The shower head should be angled after each use to allow the remaining water to flow out. This is the easiest yet necessary way to reduce the build-up of limescale from the water inside the shower head. Tilting the shower head additionally reduces the risk of the product becoming prone to leaking, allowing the product to serve its purpose reliably for an extended time.
